/269/

131 Of the two centers of Bororo habitation situated, one to the
361 northwest of Cuiabá and the other east-southeast of the same city,
[648] the second today is made up of three groups of native villages:
[799] those of the middle and upper São Lourenço, provided with residents of the Service de Protection des Indiens /Indian Protection Service/, those of the Garças River, in the diamantiferous region, supervised by the Salesian missions, and lastly the three aldées /villages/ of Kejara, Pobori, and Jarudori on the Río Vermelho, a tributary on the left bank of the upper São Lourenço, which have been less directly affected by religious and administrative
● 101 influences. We stayed in the most important of them, the Kejara
132 aldeia, during Janauary-February, 1936, at the time when the
648 rainy season completely isolates the natives from the rare contacts which they are able to have at other times of the year with the Brazilian population; besides, the latter, never very numerous, some time ago completely evacuated the region, where material
563 and sanitary conditions seem particularly unfavorable. Aside from two telegraph operators, only a few families of fishermen, leprous for the most part, live only on the banks of the rivers.

361 Kejara aldeia occupies a wide, partly natural clearing on the left bank of the Río Vermelho right on the riverbank and is bound on the south, west, and east by red sandstone escarpments.
241 Native gardens—manioc, maize, and rice—extend for several
137 hundred meters all around the village, closely mingled with the forest or brushwood which is beginning to come up again. Across
231 them, as across the village, freely wander some hens and ducks,
177 presents of the Protection Service, which live today in a half-
[223] wild state and /270/ have to be shot with the bow to be caught.
621 In January-February, 1936, Kejara aldeia comprised, in addition to the "men's house," 27 houses, /each/ inhabited for the most
621 part by several families. The total population, impossible to
162 evaluate in a precise fashion—part of the village is constantly
[221] away, some fishing, some hunting, and some either visiting or on a mission to other native villages, amounted to approximately 140 people, the number of women being less than that of men,

THE BORORO

By Robert H. Lowie

TRIBAL DIVISIONS AND HISTORY

The *Bororo* linguistic family comprises two major branches, the *Bororo* proper and the *Otuké* (Créqui-Montfort and Rivet, 1913). Culturally, the *Otuké* must be considered with the tribes of the Province of Chiquitos (Handbook, volume 3). Ethnographically, the *Bororo*, at least of the *Eastern* subdivision, are far better known.

I. *Bororo:* (1) *Eastern Bororo;* (2) *Bororo da Campanha;* (3) *Bororo do Cabaçal;* (4) *Umotina* (*Barbados*), formerly between the upper Paraguay and Sepotuba Rivers, peaceable since 1913; remnants survive in Barra dos Bugres; (5) *Bororo* of the upper Rio Cuyabá; and (6) *Bororo* in the Minas triangle (aldeas of Sant' Anna, Pisarrão, Lanhoso, and da Pedra, founded in 1741 with *Bororo* from the Rio dos Porrudos as a protection against the *Southern Cayapó*. In 1811 part of the aldea das Pedras was transplanted to Bananal, an Araguaya River island. The fifth and sixth groups are now extinct.

II. *Otuké:* (1) *Otuké* proper, about lat. 17°–18° S., long. 59°–60° W.; (2) *Covareca*, about lat. 17° S., northwest of the preceding; and (3) *Curuminaka*, just southwest of the Guaporé headwaters, lat. 16° S.

The *Bororo* subfamily centers in Matto Grosso, but extends slightly across the Bolivian border and into western Goyaz. Excluding the virtually extinct groups noted, we may recognize a *Western* and an *Eastern* subdivision. The former includes the *Bororo da Campanha* (*Campina*), i. e., the plains dwellers southwest of the lower Rio Jaurú, an affluent of the Paraguay River; and the *Bororo Cabaçaes* (*do Cabaçal*), north of the Jaurú River on both banks of the Rio Cabaçal. The *Eastern Bororo*, or "*Orarimugudoge*," to whom the blanket term "*Coroados*" has sometimes been applied, extends from lat. 15° to 18° S. and from long. 52° to 56° W. The three subtribes live about (1) the upper and middle São Lourenço River; (2) the Rio das Garças, a tributary of the Araguaya River; and (3) the Rio Vermelho, affluent of the upper São Lourenço; here are the villages of Kejara, Pobori, and Jarudori.

In 1888, Von den Steinen (1894) visited a São Lourenço group which had been settled at Thereza Christina, near the Prata-São Lourenço confluence, southeast of Cuyabá. He set the population at 350 and heard that it had originally been 1,000. Another group was then settled at Isabel, at the Pequiry-São Lourenço confluence. In 1901, W. A. Cook (1907) visited eight villages in this region.

The Rio das Garças district has been missionized by Salesians since 1902. Colbacchini describing the natives in a major treatise (1925). In 1934, Baldus (1936) visited Sangradouro, Meruri, and Tori-paru, villages in this area, and estimated that less than 1,000 *Bororo* lived east of the Paraguay River. In Tori-paru he found a little over 100 residents, 35 men occupying the men's house.

Lévi-Strauss (1936) investigated the village of Kejara of the Vermelho division and estimated its population at 140. This is probably Frič's Kejari (1905), since moved to a different spot.

In 1894, J. Kosiowsky (1895 b) saw some *Western Bororo* in Descavaldos and across the Bolivian border.

In 1931, Petrullo (1932) took photographs of the *Bororo da Campanha* and on the São Lourenço River. His excavation of sites at Descavaldos revealed pottery and a method of interment different from those of the *Bororo* and presumably pre-*Bororo*.

3:Petrullo E-5 (1931)1932 SP8 Bororo SP8
Mato Grosso SP1

M 13 chapadão, as is also mammalian and floral life. The rivers are likewise well stocked with fish, and as the pantanal originally was comparatively thickly settled, so is this part of Matto Grosso. The quantities of fish seem to determine the density of the population. Indian villages are found along the rivers quite closely together. It is this section of Matto Grosso that is poorly and in some parts totally unknown.

M 361 Most of the southern part of the state is given over to civilized pursuits. The aboriginal peoples have practically disappeared, either having become exterminated or absorbed by the newcomers. From the time of the arrival of the earliest exploring parties, diamonds, gold and rubber have attracted the European adventurer, but now the main activity is cattle raising, though the search for diamonds still continues, especially at the headwaters of the Paraguay and the Araguaya rivers. A number of modern towns thrive along the railroad line, which runs from Porto Esperança on the Paraguay river, eastward. The most important cities are Cuyabá, the capital of the state, and Corumbá, the terminus of the shipping lines from Montevideo and Buenos Aires. S. Luis de Caceres is a typical frontier town, conservatively maintaining an atmosphere of the old colonial days. [Plate II, 1.]

B 361 648 Only the Eastern Bororo, on the São Lorenço, have survived the incursions of the white man. Pacified but a few years ago, they have been collected on reservations, where they still maintain their own culture. Pirigara, Corrego Grande and Rondonopolis, all on the São Lorenço river, are comparatively large settlements.

B ● 101 The Bororo da Campanha have almost disappeared, and there exist but a few families of the semi-nomadic Guató. These are not of pure blood, having mixed with negroes and whites, and have practically forgotten their original culture. On the Taquary, a few Terenos have been collected in a settlement.

B 101 648 At Barra dos Bugres a few Barbados[1] remain. Their pacification has been completed and they are making rapid progress under the tutelage of the Inspectoria.

000 Further north the Paressi and some Nhambikuaras live in settlements along the telegraph line. The Paressi have shown great adaptability for Brazilian culture.

The Inspectoria maintains other posts, in various parts of the country, but at places like Pedro Dantes it has not succeeded in establishing permanent settlements. [See map, Plate XXV.]

[text continues on p. 100]

3:Petrullo E-5 (1931)1932 SP8 Bororo SP8
Mato Grosso SP1

Eastern Bororo

B 101 184 361

On the São Lorenço river are a number of colonies of the eastern Bororo, who have not come so much under the influence of European civilization. These people still live apart in their villages and maintain their own institutions and industries. They unquestionably differ from the western Bororo in many ways.

B 114 361

The colonies at Pirigara, Corrego Grande (São Lorenço), and Rondonopolis were visited by the expedition, but Corrego Grande received most attention. Sound motion-picture studies of the dances and industries were made and rich collections of artefacts obtained.

B 361 184 423

Unlike that of the Western Bororo, the village is still an orderly affair, being built in circular fashion with the men's hut in the center. The men actually live in this hut, the other houses really belonging to the women. Fishing, the cultivation of manioc, and hunting are the main occupations. [Plates IV, 2; V, 1, 2; VI, 1, 2; VII, 1, 2.]

B 114

Since an excellent study of a community of Bororo exists by Colbachini, little could be said of a descriptive nature in this brief paper that would not be duplication. Therefore, it is felt that time and space ought to be given to the Xingu trip.

At the Headwaters of the Xingu River

M 114

My original plans were to descend the Kuluene river, which has never been descended by an ethnographer; in fact, only recently has it been mapped by Major Ramior Noronha. However, after several conversations with Major Noronha at Cuyabá, finding that such a plan would add difficulties which would not bring any added results, I decided to descend the Kuluseu and ascend the Kuluene to the Seventh of September, and then to ascend that river. This had the advantage of avoiding a longer overland trip and many miles of rapids, and offered the opportunity of seeing more aborigines.

For purposes of reconnaisance and as a safety measure, it was decided to make use of the airplane. Accordingly, before beginning the overland trip, two flights were made to the north. We decided to depend on water for taking off and landing, since the country did not offer such open runways that landing on wheels would be safe.

They compare
181 the knowledge they have about their environment with the
82 knowledge of the Brazilian settlers. They know the origins
563 and the names of places, things, plants, and animals; the Brazilians do not. The Bororo particularly stress the number of their myths and songs and the beauty of their ceremonies, especially the funeral ceremonies. The Brazilians, they say, bury their dead as they bury their dogs--under earth without any ceremony.

181 That knowledge is highly valued among the Bororo is sub-
828 stantiated by the fact that the chief of a village is always
622 the most knowledgeable man. Social status and functions are
554 connected with particular lineages and transmitted matrilin-
611 eally, but the true influential leaders and authorities are
613 the men who excel in knowoedge; i.e., they know the myths and
538 songs and their meanings; they know the exact sequence of
533 rituals and the important sacred and secret names of things.
788
352

Pobojari, the Bororo village where most of my research
● 101 was carried out, was situated halfway between the areas under the administration of the Indian Protection Service and the
121 missions. The choice of the village was determined by the fact that Pobojari was the only independent Bororo village, and we thought that it might be the least acculturated. My wife and I moved into the village in December, 1965, and we lived there until December, 1966. From January, 1967, until June we stayed in one of the missions. From July, 1967, to August we lived in Jarudori. Jarudori was once an important Bororo village but today has become a Brazilian settlement.

101 Only an old knowledgeable Bororo chief and his wife are still living there, and we moved there to work with them.

114 The village of Pobojari was built in the traditional circular shape, with the men's house in the center and nine [162] houses around it. In one year of residence there we counted a total of 99 people in the village (of whom 13 were children) [163] with roughly 50 people there at any one time. Eight people [165] died, and there was one birth. The majority of the adult [733] population were alcoholics and suffered from various kinds [164] of respiratory diseases. We were able to gather considerable data watching funeral ceremonies, but after the first few deaths these ceremonies became an obstacle to our work because our informants were involved so much of the time performing ceremonial duties. As a result the situation in the village was quite depressing and the working conditions were at times difficult. The days were often spent waiting for an inform- 114 ant to sober up. The situation sharply contrasted with re- 178 ports of previous researchers which depicted the Bororo as a happy and easygoing people always ready to laugh. But the [224] economic conditions had changed. Game was practically non- [226] existent, and great time and effort were required to catch [167] fish in waters that had become muddy as a result of agricultural changes introduced by the Brazilian settlers.

114 The land surrounding our village had already been allot- 167 ted to Brazilian farmers, and only our presence there kept 177 the settlers from forcing the Bororo to move away. "Americans" are considered powerful people, and besides everybody

101 be chosen among the yorubodarege lineages. But whatever the correct interpretation is, if in fact there is one, the people of one's own moiety and those from the other one will all be merged in the term paobe (first person plural inclusive) when contrasting the Bororo to civilized people or some other Indian tribe.

*601 561 562 In addition to genealogically specified kin-types, any Bororo, if necessary, may be designated by a kinship term:

imana ("a man's older brother"): Any man of the same moiety who is older than Ego.

ivuri ("a woman's older brother"): Any man of the same moiety who is older than Ego.

iyedaga ("grandfather"): Any imana or ivuri who is knowledgeable or quite old.

ituye ("older sister"): Any woman of the same moiety who is older than Ego.

iviye ("younger sister"): Any person of the same moiety who is younger than Ego.

iyoqwa ("father"): Any man of the opposite moiety who is older than Ego. Also any man, regardless of his age, who belongs to Ego's father's clan.

imarugo ("grandmother"): Any woman of the opposite moiety who is older than Ego. Also any woman, regardless of her age, who belongs to Ego's father's clan.

itonaregedu ("child"): Any person of the opposite moiety who is younger than Ego and does not belong

772 Commentary:

1. Village vs. jungle; central vs. peripheral; civil vs. wild; day vs. night.

772 361 82 [101] [562] [775] The Bororo call themselves boe. The term bororo refers not to the people but to the ceremonial plaza situated west of the men's house. It also refers to the center of the village and, by extension, to the village itself. A place cleared of trees and brush, in contrast to its surroundings, the plaza is the setting of the most important ceremonies and the domain of men and Aroe--the spirits or souls--which the men themselves become when performing ceremonies. It [772] [222] [229] is a social, not a wild, place. Outside of the village is the domain of the animals and Bope. Secular activities such as hunting and gathering are performed there; and big trees with their dark shadows are the favorite places of Bope. Darkness and night are Bope's time. During the night the [551] Bororo do not like to wander outside their village. And even in the village people should not be called by name during the night. Aroe are not bound to any particular time

ritual practices accompanying death are often among the most elaborate and impressive ceremonies to be found in the primitive world. No more spectacular funerary ceremony is known to ethnology than that of the Bororo Indians of Brazil.

The Bororo now living on the São Lourenço River in the state of Mato Grosso call themselves *Orarimogodogue*—Fish People. Their settlement consists of a number of large thatched houses arranged in a circle around an open dance plaza. Each hut is occupied by a group of closely related women, together with their husbands and children.

P 173 was born on the Matihurizá, "where there is neither land nor forest," that is, no shore, "and he went far upstream." The Matihurizá is the Tapajoz, if it does not represent the Amazonas itself. Thus, if the main movement of the Karaiben tribes was in the direction from south to north, at least this part of the Nu-Aruak group moved from north to south.

To be sure, the good people are not concerned about the slight contradiction that Uazale came from the far north and that his grandmother Maisõ made the Rio Cuyabá as the first of all rivers!

/441/

Chapter XVII.

000

On the Bororõ.

I. Historical. Founding of the Colonies.

Bororõ da Campanha and do Cabaçal. "Coroados" = Bororõ. Confusion in the literature. Little Sebastian. Martius. Ending of warfare and catechesis. Pillage in the colonies.

B 101 Two groups of Bororõ are distinguished in the Mato Grosso: the "Bororõs da Campanha," or of the plains, and the "Bororõs Cabaçaes," or of the Rio Cabaçal. The Bororõs da Campanha live in small settlements below Villa Maria, on the right bank of the Paraguay and Jaurú, toward Bolivia, the Bororõs do Cabaçal not far from them in the north, along the banks and in the source region of the river of the same name as well as of the Jaurú, both of which empty into the upper Paraguay from the right, the former at Villa Maria, the latter somewhat farther south.

B 131 133 361

B 175 [114] These Bororõ were not infrequently visited by travelers; in 1827 they came into contact with the Langsdorff Expedition; in the same year the Austrian naturalist Natterer gathered an abundant collection among them, now in the Vienna Hofmuseum; Count Castlenau and his companion Weddell, who stayed in the Mato Grosso during their famous crossing of South America in

/442 cont./

175 The colonization history of the province tells us about other Bororó, even in the earliest epoch. In 1742 Antonio Pires set out with a band of Paulistas and 500 friendly Bororó to subjugate the Kayapó /Cayapo/ in the southern part of the province; he took more than 1000 captive, established a few military posts, and left behind "a garrison of Bororó" there.

131 All these Bororó originally come from the region of the Rio S. Lourenço; from its lower part these nomadic hunters spread out into the region between it and its tributary, the Cuyabá, as well as along the right bank of the Paraguay lying opposite its mouth, whereas the ones originating from the upper part of the S. Lourenço are encountered by us in the eastern and southeastern part of the province along the source rivers of the Araguay /Araquaia/, the "Contravertenten" /contraflows/ of the S. Lourenço, as neighbors and enemies of the no less strong Kayapó.

114 It is difficult to understand why such great confusion has prevailed and still prevails about the Bororó among the people of the Mato Grosso themselves as well as in the literature. We
101 learn from Castelnau that the Bororó of the Cabaçal were at that time still called "Porrudos"; "the old name of the Rio S. Lorenço, which it still bears in its upper part," as the geographer Melgaço states (Rev. Trim., Vol. 47, p. 459), is now "Rio dos Porrudos."**

** Porra means "penis" in Portuguese; the penis-cuff of the Bororó suggested the name. Since the same costume, widespread throughout Brazil, did not call forth this name elsewhere, one suspects that here where the people said that they were called "Bororó" the Paulistas were moved to make a bad pun.

The Indians of the S. Lourenço are today called "Coroados," the shorn ones -- a name that positively invites confusion. We could have called the Schingú /Xingu/ Indians "Coroados" too; there were Coroados especially in the river basin of the Paraná

/442 cont./

101 and still others on the Rio Xipotó on the border of the provinces of Minas Geraes and Rio de Janeiro, tribes which, both in origin and language, are altogether different from one another as well as from the "Coroados" of the Mato Grosso.

648 In Cuyabá the "Coroados" were the object of general interest upon our arrival. After always being regarded as the worst enemies of the /443/ rural population in the entire region between the Rio Cuyabá and S. Lourenço up to the boundary of Goyaz /Goiás/, they finally, thanks to the efforts of President Galdino Pimentel in the year 1886, became "pacificados," pacified, and were settled in two military colonies on the S. Lourenço.

101 By no means all the infamous deeds with which the
648 "Coroados" were charged were actually committed by them. In the northeastern part of Cuyabá in particular they were confused with the Kayapó, who carried on predatory raids there. Moreover, no one in the capital knew that the feared "Coroados" were nothing but tribal brothers of the same Bororó who had been living for a long time in several villages to the right of the Paraguay in peaceful conditions and in part in very reduced circumstances, indeed even tribal brothers of the same Bororó who were already allied with the founder of Cuyabá, Antonio Pires, before the middle of the eighteenth century and were used by him as a garrison!

I was not a little surprised when I learned from "Atahualpa," a "Coroado" brought to the capital along with a few companions for baptism, that they call themselves Bororó.

114 Thus the conversation with Atahualpa gave me the op-
[113] portunity to solve another puzzle quickly. I had just read in the book by Joaquim Ferreira Moutinho, Noticia da provincia de Mato Grosso (S. Paulo, 1869, 425 pp.) the report about a few captive "Coroados" (two girls and a boy) brought to Cuyabá in 1859, and found there a word list (p. 192) which I wished to compare with my own list. To my astonishment, nothing tallied, absolutely nothing. The author had been given the words by the "Coroado" boy, about whom he tells the most

2: Steinen--545 E, D-5 (1884, 1887-1888) 1894 SP7 Bacairi
Bororo SP8

/444 cont./

114 permits us to discover the source. For the words, taken down by the Castelnau Expedition, unfortunately do not have a Portuguese, but a French spelling, in which several double vowels have an entirely different pronunciation than in Portuguese, and they correspond in a manner in which two accounts independent of each other never correspond.

[101] One of the few who, as I later found, correctly assumed the identity of the "Coroados" and Bororó was Baron Melgaço,* as

[113] * Revista Trimensal, Vol. 47, p. 396. Baron Melgaço's civilian name was Aug. Leverger and he was of French origin.

competent a president (for the first time in 1851) as a geographer of the Mato Grosso. "The Coroados lived in the source region of the S. Lourenço; they have nothing in common with those of the Parana basin; I suspect they were Bororó." He merely regarded them as extinct.

In view of the confusion which occurs in the country itself, it is not surprising that Martius has very erroneous conceptions of the Bororó. He discusses them under the Central Tupí; ** he

[113] ** Zur Ethnographie Amerika's /On America's Ethnography/, pp. 209 ff., p. 263, Leipzig, 1867.

himself doubts, correctly, that they represent a Tupí tribe, but then falls victim to the strange notions that formerly prevailed about the composition of the Indian tribes and that are best expressed in his favorite expression "Colluvies gentium" /tribal rubble-heap/. "It is probable that under Bororós are understood hostile Indians generally, without any definite designation of names, indeed perhaps occasionally also a Colluvies gentium, which, without a clearly stamped and firmly held nationality in language, customs, and physical appearance, split up into small bands without fixed residence, to roam about plundering and murdering. In Mato Grosso and Goyaz, it is true, individual of the Tupí tribe may be the basis of such predatory communities. But since other Indians

/444 cont./

114 have joined them, they have changed their language to a thieves' idiom (!). In Cazal (Corografia brasilica, p. 302) two hordes of [101] Bororós are mentioned: the Coroados, or shorn ones, and the [113] Barbados, bearded ones. The former are not navigators, but [131] nomadic hunters who are said to dwell to the south and southwest of the city of Cuyabá in inaccessible wildernesses on the sources of the Rio de S. Lourenco and the Rio dos Mortes, a tributary of the Araguaya." These statements by Cazal are perfectly accurate and true, and he, too, thus recognized the "Coroados" as Bororó. By /445/ "Barbados," Martius goes on to say, perhaps the Guató are to be understood, they sometimes attacked caravans traveling from Goyaz to Cuyabá and extended their raids as far as Diamantino. [101] The Guató, however, have never come into this region, they live as water nomads in the upper Paraguay region; those "Barbados" were probably Kayapó or even Bororó.

114 101 Martius, of course, explains the name Bororó according to the lingoa geral, either, if coming from the neighbors, = "warriors, enemies," or, if they themselves say it, = "we, the masters of the soil." The Bororó, however, know nothing about the lingoa geral and they call themselves this.

797 I shall now drop the name "Coroado" altogether; I shall report some things about the so-called "catechesis" or conversion of this Bororó tribe, which was attempted in vain for many years, but could scarcely have succeeded because the attempts were carried out in the most topsy-turvy manner. A military colony [648] set up on the right bank of the S. Lourenco, which was established toward the end of the 'seventies by Major J. Lopez da Costa Moreira, served as the base.

648 In 1878 one Captain Alexander Bueno with 70 Terena Indians, a tribe belonging to the Guaná group, undertook an expedition "to drive out the Bororó." He had been secretly instructed, as I was assured, to shoot to death as many as possible and was favored by success to such an extent that he was able to show the President a bag full of ears. Of living ones he brought along two women and two children.

Guato SP15
Bororo SP8

GO 105 175 [595] /550 cont./ Guató with five or six canoes full of women and children. Usually they have two wives, some are content with one. Here and there they cultivate a little maize, mandioca, and fruit, but more as delicacies than for subsistence. They also gather the wild rice (arroz silvestre), which grows there in abundance, but only for the needs of the moment. Very skillful with bow and arrow; engage in jaguar hunting with spear and javelin. Friendliest barter. The men starting to wear shirt and trousers, the women petticoats. Are faithful, upright, harmless, but have occasionally shown that they are capable of offering resistance and avenging injuries. Very inclined to drunkenness. Most of them understand our language and many adults speak it.

[Report 1872: This tribe is almost extinct.]

BO 105 175 [131] [101] 13 Bororós da Campanha. Two groups: 1) Village in Bolivia near Salinas, 2) village opposite Escalvado on the right bank of the Paraguay, one league from the river. Are peaceable, carry on agriculture, have pigs and chickens. Cotton hammocks. Some speak Portuguese. Have often brought slaves and deserters from Bolivia into the garrisons. 150-200.

[In 1858 it is said: one part lives in the Campanhas de Marco and another beyond the Corixa Brook.]

BO [101] [131] 14. Bororös Cabaçaes. Two hordes, until recently savage, one on the sources of the Jaurú, the other on those of the Cabaçal. Made numerous attacks on the road from Cuyabá to Matto Grosso,*

* The later name for Villa Bella on the Guaporé.

so that troops were often sent out against them and killed many, irrespective of age and sex. They themselves did not want to take captives, but killed as many as they could, irrespective of sex and age. Nourish themselves on the fruits which the earth yields freely and, at the most, plant some pururuca maize which they eat unripe, batatas, and bananas. No industry. /551/ Have bows and arrows, poor pots, straw plaiting with which they in part cover their nakedness. In 1842 the Reverend Curate of Matto Grosso, José da Sa Fraga, succeeded through persuasion and gentleness

THE PEOPLE AND THEIR HABITAT

131 The Umotina, who call themselves the Balorié,
●[10] are settled today in the Indian Post of Fraternidade Indígena near Barra do Bugre on the Paraguay River west of Cuiabá. Before coming to the Post they occupied a village at Tira Santida just
[197 below Tres Barras. The Umotina, who today
161] number about 65, are related linguistically to the
184] Bororo who live directly to the east of them. In two respects, at least, they differ sharply from
142 their neighbors—they have a pure Hawaiian-type kinship system and are pronouncedly dolichocephalic. The local Brazilians call them the Barbados, owing to their beardedness.

361 In the old days the village (*muktmo*) was built
621 on the bank of a river and consisted of two rows of
342 houses separated by a narrow plaza. The house (*ishipd*) was rectangular with a gabled roof coming down to the ground, the whole being covered with pacova palm fronds except the two ends which were left open. This house type is the same as that formerly found among the Guató who live to the south of the Umotina. Each family had its own house, the occupants sleeping on mats spread on
[374] the ground. The husband kept a fire going all night not only for warmth but also to drive away the mosquitoes.

291 In the past men wore no clothes but after puberty used a penis sheath (*bakyotókwa*) made from a buriti palm leaf. The foreskin was pulled
[834] over the glans, and the leaf was wound around it and fastened with twine, the purpose being to hide the end of the penis from the women. Men
302 wore their hair long, tied in a knot at the back of their heads, and allowed their beards to grow; but eyebrows, eyelashes, and pubic hair
[304] were plucked out. The lobes of the ears and the lower lip were pierced. Women, on the other hand, cut their hair short, and plucked out their eyebrows and eyelashes but not their pubic hair.
291 Women wore a knee-length skirt (*imetá*) made
304 from woven cotton. Like the men, the women had their ear lobes pierced.
